CLAIMS

1. A plant basket insert divider apparatus which	_
creates an enclosed water reservoir comprising:	2
a plate portion including a water inlet shroud having a	3
successively increasing surface projection which provides a	4
means for implementing water; also included in said plate	5
portion are holes for securing an absorbent material and a slot	6
forming an inwardly open recess adjacent to the water inlet	7
shroud which acts to properly align said shroud over a water	8
portal in the sidewall of an accommodating plant basket.	9
 Apparatus as set forth in claim 1 wherein said 	1
holes of said plate portion include at least one barbed	2
projection for capturing an absorbent material.	3
 Apparatus as set forth in claim 1 wherein said 	1
water inlet shroud includes an inwardly extending recess.	2
4. Apparatus as set forth in claim 3 wherein said	1
water inlet shroud is beveled upwardly from said plate portion.	2
 A plant basket insert divider apparatus which 	1
creates an enclosed water reservoir comprising:	2
a plate portion including a water inlet shroud having a	3
successively increasing surface projection that forms an	4
inwardly extending recess which provides a means for	5
implementing water; included also in said plate portion is a	6
hole having an inward barbed projection for capturing a section	7
of absorbent material, and whereon the outer edge of the plate	8
portion is a slot creating an inwardly open recess adjacent to	9
the water inlet shroud which acts to properly align said water	10
inlet shroud over water portal in the side wall of an	11
accommodating plant basket.	12
6. Apparatus as set forth in claim 5 wherein said	1
plate portion and said water inlet shroud are solid in nature.	2

 Apparatus as set forth in claim 5 wherein said 	1
plate portion includes at least one hole, having an inward	2
projection of sort for capturing an absorbent material.	3
8. A plant basket insert divider apparatus which	1
creates an enclosed water reservoir comprising:	2
a body member having a plate portion and a water inlet	3
shroud portion, whereas one end of said shroud portion	4
arcuately projects from said body member to form an inwardly	5
descending water inlet recess, and said plate portion includes	6
holes for securing an absorbent material.	7
9. Apparatus as set forth in claim 8 wherein said	1
plate portion includes at least one inwardly extending recess.	2
10. Apparatus as set forth in claim 8 wherein said	1
plate portion includes at least one support pillar projecting	2
downwardly.	3
11. Apparatus as set forth in claim 8 wherein said	1
holes of said plate portion have a barbed projection for	2
capturing an absorbent material.	3
12. A plant basket insert divider apparatus which	1
creates an enclosed water reservoir comprising:	2
a body member having a solid plate, and said solid plate	3
includes one or more holes, each having one or more inwardly	4

barbed projections for capturing an absorbent material.
